

# Non-Proprietary Software

The Blue Star Power Systems, Inc. Digital Gen-Set Controller (DGC-2020) is an advanced genset control system with extensive functionality and flexibility. It's a total system solution for your emergency, stand-alone, and paralleled generator set applications. Comprehensive control, metering, and protection capabilities maximize flexibility and make it the optimal choice for a broad range of applications. The environmentally-rugged, encapsulated design has a proven track record of reliable, trouble-free operation.

More importantly, the DGC-2020 controller does not contain proprietary software. This means easy and open access to your power system. The majority of our competitors require you to rely on their proprietary software for the life of your unit and use only their service network to access your power system. Blue Star Power Systems, Inc. allows our distributors and end users in an emergency situation to perform maintenance, trouble shooting, and adjustment of the settings to their power systems. Additionally, after the warranty period ends, the end user is able to use any service provider they choose to service their unit. Free updates for your Control Panel software can be downloaded anytime from our website.
